GLEN RIO ARISTO

089529307135 | glenrioariesto@gmail.com | www.linkedin.com/in/glenrioaristo | github.com/glenrioariesto

I graduated from Telkom University with a Bachelor's degree in Software Engineering in 2024, achieving a GPA of 3.50. I have a strong enthusiasm and a passion for continuous learning, I bring hands-on experience as a Full Stack Developer. I have worked on various projects, including deploying applications on AWS and managing NoSQL databases using Firebase. For frontend development, I have expertise in using React and Tailwind CSS, while for backend development, I have used Express.js. In addition, I have experience in API testing with Postman and have worked with technologies such as CodeIgniter, Laravel, PHP, HTML, CSS, and Bootstrap. In my final project, I worked as a backend developer, building a robust system using PostgreSQL as the database and PgAdmin as the database management system. I successfully integrated the system with the ChatGPT API, demonstrating my ability to provide end-to-end solutions using modern technologies. I would like to contribute my knowledge and skills to your company as a backend developer and grow professionally in a dynamic environment.

Work Experiences

Startup AIGENSEE - **Bandung, Indonesia** **Agustus 2024 - now**

Fullstack Web Developer

Successfully developed 6 educational games for the Ministry of Education and Culture of the Republic of Indonesia, aimed at junior high school students to support an engaging and interactive learning experience. In parallel, developed an online course platform for AIGENSEE, a creative technology startup that combines brand innovation with AI-generated digital content. The platform specializes in courses centered on AI and digital creativity, aiming to democratize access to cutting-edge knowledge in the creative technology field. Played a key role in launching the course website, implementing backend infrastructure, user-friendly UI/UX, and payment gateway integration. As a result, helped the startup achieve a stable monthly revenue of IDR100 million immediately after launch—marking a strong early growth phase and validating product-market fit.

Lecturer Project - **Bandung, Indonesia** **Mei 2024 - Juni 2024**

Data Colection

Collected and processed over 100,000 tweets related to the 2024 Indonesian presidential election, focusing specifically on public sentiment in the DKI Jakarta area. Utilized Google Colab and Python to scrape, clean, and structure Twitter data for further analysis. The goal was to understand regional public opinion, trending political topics, and sentiment patterns among Jakarta's residents during the election period.

Bebras Indonesia - **Bandung, Indonesia** **Juli 2022 - Agustus 2022**

Data Colection

Responsible for collecting data from various vocational high schools (SMKs) across 10 provinces in Indonesia. This involved identifying target schools, coordinating with school representatives, and conducting surveys or interviews to gather information related to needs, challenges, and potential areas of collaboration. The collected data served as a foundation for decision-making in the planning and execution of upcoming Bebras projects, particularly those focused on enhancing computational literacy and strengthening informatics curricula in vocational education. Additionally, contributed to documentation and reporting of findings for the research and development team.

Education

Telkom University - **Bandung, Indonesia** **September 2020 - Desember 2024**

Bechelor Degree in Software Engineering,
3.50/4.00

Thesis Title *: Design and Implementation of Backend Server System with OpenAI Integration for User Story Generation in Web-Based Elicitation Tools*

- **Software Engineering Student Association** **Desember 2022 - September 2023**
  External Division Staff
  I have experience in an external division organization that focuses on networking and providing platforms for Software Engineering students to donate. The donations collected are used to help those in need, including distributing funds to flood victims in Garut.

- **Software Engineering Quality Leaders** **Mei 2022 - Agustus 2022**
  Secretary
  Responsible for managing official documents, handling incoming and outgoing correspondence, and recording meeting minutes. Ensured organizational efficiency through clear communication and proper documentation across various internal activities.

Project

- **Aigensee**
  I developed Aigensee, a web-based learning platform focused on art and artificial intelligence (AI), using Next.js with TypeScript, PostgreSQL as the database, and Tailwind CSS for a responsive user interface. The project features a modular architecture separating the frontend, backend, and API layers, along with a relational database design supporting user management, courses, affiliate systems, and transactions. Aigensee is currently under active development, with new features such as an affiliate system and an efficient course management dashboard being implemented.

- **Electronic Book Simulation**
  Electronic Book Simulation is an interactive static web-based educational game developed as a digital learning tool to support the Ministry of Education and Culture's (Kemendikbud) educational program. This game is embedded within Kemendikbud's official learning books as an interactive simulation designed to enhance students' understanding of the subject matter. The application was built using HTML, CSS, and JavaScript without any additional frameworks, focusing on delivering educational content in an engaging and easy-to-digest format through simulations and gamified elements. This project aims to increase student motivation by providing a fun and visually interactive learning experience.

- **Elicit Tools**
  Elicit Tools is a user requirements elicitation application designed to support the software development process. My responsibilities in this project focused on designing a well-structured backend architecture, building efficient API endpoints, and implementing ChatGPT integration to assist in analyzing and interpreting user needs. The project emphasizes backend development, including data management, authentication systems, and seamless communication between the server and the AI model to deliver more accurate and relevant elicitation results.

- **Obat Mahasiswa**
  Obat Mahasiswa is a health consultation application that enables university students to schedule appointments and consult directly with doctors online. The application is developed using React for the user interface, Tailwind CSS for responsive styling, and Firebase with a NoSQL database for real-time authentication and data storage. The backend is built with Express.js, reinforcing the developer's understanding of modern fullstack JavaScript technologies.

- **Menu Master**

Menu Master is a restaurant menu management application developed using the CodeIgniter framework as part of a major university project. The application is designed to simplify the management of food and beverage menu data by utilizing PHP (CodeIgniter), MySQL as the database, and HTML, CSS, and JavaScript to build a responsive user interface. This project aims to enhance students' understanding of the MVC (Model-View-Controller) architecture while also improving their skills in HTML, CSS, JavaScript, PHP, and MySQL database management for web application development.

Competition Experiences

- Participants in the NIFC 3.0 UI/UX Design Competition (2024)
- Participants in the 2024 SITEFEST UI/UX Design Competition (2024)

Skills

- **Hard Skills** : Express js, MySQL, PostgreSQL, RESTful API, React, Tailwind, Firebase, Laravel, NextJS, Shadcn, Javascript, TypeScript, PHP, Midtrans API, Chatgpt API, Prompting
- **Soft Skills** : Communication, Problem Solving, Team Collaboration, Analytical Thinking, Attention to Detail
- **Software Skills** : Git Control, Visual Studio Code, Postman, Figma, pgAdmin, phpMyAdmin, Jira, Notion, Chatgpt, Grok
